MAKING PIPES WORK

To whom it may concern,

Re: Reference for Central Drilling Ltd

Pipeworks is a Fletcher Construction owned business based in Auckland and operating throughout the North Island. Pipeworks is involved in rehabilitation and new installations of gravity stormwater and wastewater pipe lines ranging from 50mm to 2m diameter.

In late 2008 Pipeworks won a tender with the Waitakere City Council to up grade a waste water catchment in West Auckland. The project involved open cut and directionally drilled pipe installations, construction of new man holes and connection of existing laterals to the new pipelines.

The new graded pipelines needed to be accurately constructed. We chose Central Drilling Ltd (CDL) as our key sub contractor due to their reputation for quality and reliability. During the project the staff of CDL demonstrated a high level of professionalism and capability.

CDL's equipment is modern and well maintained. CDL's drills are the quietest available in the market place, this was a bonus for this project as we were working in densely built up residential areas.

On this project CDL successfully installed gravity pipes ranging from 180mm to 315mm diameter.

Central Drilling Ltd demonstrated a high level of capability and I would have no hesitation in recommending them to undertake gravity pipe installations under similar circumstances.

Regards

Paul Southen
